THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS** FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

DETAILED ACTION

Allowable Subject Matter

1. Claims 1-21 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: applicant's admitted prior art discloses a method of automatic processing of a speech signal comprising: an automatic step of determination of at least one sequence of probability models coming from a finite directory of models, each sequence describing the probability of acoustic production of a sequence of symbolic units of a phonological nature coming from a finite alphabet, the said sequence of symbolic units corresponding to at least one given text and the said probability models each including an observable random process corresponding to the acoustic production of symbolic units and a non-observable random process having known probability properties, so-called Markov properties (*referring to figure 1 or pages 1-3 of the background of the invention section*); a step of processing a speech signal to determine a sequence of digital data strings, known as acoustic strings, representing acoustic properties of the speech signal (*referring to figure 1 or pages 1-3 of the background of the invention section*); a step of alignment between the said sequence of acoustic strings and the said at least one sequence of models, each model being associated with a sub-sequence of acoustic strings, forming an acoustic segment, and each value of the non-observable process of each model being associated with a sub-sequence of acoustic strings forming an acoustic sub-segment in order to deliver a sequence of non-observable process values associating a value with each acoustic string, known as an aligned sequence (*referring to figure 1 or pages 1-3 of the*

background of the invention section); a step of determination of a confidence index of acoustic alignment for each association between a model of the sequence and an acoustic segment, known as a model alignment confidence index (*referring to figure 1 or pages 1-3 of the background of the invention section*) and a step of delivering a final sequence of labeled strings comprised of speech data (*referring to figure 1 or pages 1-3 of the background of the invention section*). Deng et al. (USPS 7206741) teach a method in that a speech signal is decoded by determining a production-related value for a current state based on an optimal production-related value at the end of a preceding state, the optimal production-related value being selected from a set of continuous values. The production-related value is used to determine a likelihood of a phone being represented by a set of observation vectors that are aligned with a path between the preceding state and the current state. The likelihood of the phone is combined with a score from the preceding state to determine a score for the current state, the score from the preceding state being associated with a discrete class of production-related values wherein the class matches the class of the optimal production-related value (*abstract section and/or figure 7*).

Both applicant's admitted prior art and Deng et al. fail to specifically disclose a step of determination of a confidence index of acoustic alignment for each association between a model of the sequence and an acoustic segment, known as a model alignment confidence index, and corresponding to an estimate of the probability a posteriori of the model given the observation of the corresponding acoustic segment, known as the a posteriori model probability, said step of determination of a confidence

index of acoustic alignment providing data of the confidence index of acoustic alignment, characterized in that each step of determination of an alignment confidence index for a model comprises the calculation of the value of the said index at least from a combination of: the probability of observation of each acoustic string given the value of the non-observable process, known as the model probability and determined from known characteristic parameters of the probability model; probabilities of production *a priori* of all the models of the said directory, independently of one another, known as the *a priori* model probabilities; and the analytical estimation of the average duration of occupancy of the values of the non-observable process of the model. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify applicant's admitted prior art and/or Deng et al. in order to obtain the claimed invention. Therefore, claims 1-21 are allowed over prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
